GEOGRAPHY CERTIFICATE (M)

While pursuing a Certificate in Geography students will understand map types and uses, and apply geographical concepts to current events in the past, present, and future and appreciate the natural factors that influence weather and climate, as well as the terms that define them, in the context of the earth's makeup of biomes, primary spheres, and geomorphic processes. They will also explain spatial patterns and variations in human population, internal and international immigration, and how geography impacts conflict and cooperation in the world while classifying geographic regions by human or physical characteristics, and know the major regions of the world. They will engage in discussion on environmental influences on geography, including how human activities and decisions modify the physical environment; how the human and physical system of geography interact; and the roles that climate change and global warming play in our world today, including the importance of renewable resources. Student will be able to recognize, describe and synthesize the essential narratives of peoples and civilizations around the world, particularly in terms of chronology and geography and demonstrate knowledge and cultural understanding of European, American and non-Western civilizations and to compare those cultures across time.

Student Learning Outcomes for the Geography Certificate

Students will:

- Understand map types and uses, and apply geographical concepts to current events in the past, present, and future;
- Appreciate the natural factors that influence weather and climate, as well as the terms that define them, in the context of the earth's makeup of biomes, primary spheres, and geomorphic processes;
- Explain spatial patterns and variations in human population, internal and international immigration, and how geography impacts conflict and cooperation in the world;
- Classify geographic regions by human or physical characteristics, and know the major regions of the world;
- Engage in discussion regarding environmental influences on geography (including how human activities and decisions modify the physical environment; how the human and physical system of geography interact; and what roles that climate change and global warming play in our world today, including the importance of renewable resources);
- Recognize, describe and synthesize the essential narratives of peoples and civilizations around the world, particularly in terms of chronology and geography;
- Demonstrate knowledge and cultural understanding of European, American, and non-Western civilizations and the ability to compare those cultures across time.

Curriculum

Curriculum		
Code	Title	Hours
Required Course	s	
Students should to disciplinary areas	take at least one course from each of the three slisted below	12
Social Sciences		
GEOG 2200	Cultural Geography	
SOC 2550	Urban Society	

or HIST 2220The City & American Culture

HIST 1600	Non-Western World	
HIST 2600	History of Food	
HIST 2620	Ancient Civilizations	
HIST 2650	Empires: East & West	
Science		
ENV 1400	Introductory GIS	
ENV 1600	Meteorology	
ENV 1800	Environmental Science	
ENV 2500	Earth Science	
Total Hours	12
